### Historical performance - Yearly

| Year | % Gain/Loss for GVP | FSC GCC Index | MSCI GCC Index | S&P GCC Index |
|------|---------------------|---------------|----------------|---------------|
| 2022 | 41%                 | -9%           | -11%           | -9%           |
| 2023 | 69%                 | 33%           | 7%             | 8%            |
|      | -                   | -             | -              | -             |
|      | -                   | -             | -              | -             |

Note:

Support & Resistance for the week expectations

Stop Loss: the clients should close / decrease his positions if it exceed his level

Risk: difference between price and support 1

Return T1: difference between Purchasing price and Target 1

Return T2: difference between Purchasing price and Target 2

\* Gross returns, excluding transaction cost & Prices are in Countries respective currency

Purchase Price is the last closing prices, if the stock didn't reach our targets we close the position depending on the closing price/stop loss whichever is higher

**Main Technical Indicators:**

**MACD:** A trend-following momentum indicator that shows the relationship between two moving averages of prices. The MACD is calculated by subtracting the 26-day exponential moving average (EMA) from the 12-day EMA. A nine-day EMA of the MACD, called the "signal line", is then plotted on top of the MACD, functioning as a trigger for buy and sell signals.

**RSI:** A technical momentum indicator that compares the magnitude of recent gains to recent losses in an attempt to determine overbought and oversold conditions of an asset, the RSI ranges from 0 to 100. An asset is deemed to be overbought once the RSI approaches the 70 level, meaning that it may be getting overvalued and is a good candidate for a pullback. Likewise, if the RSI approaches 30, it is an indication that the asset may be getting oversold and therefore likely to become undervalued. The RSI calculation will depend on 14 days for this report.

**MFI:** A momentum indicator that is used to determine the conviction in a current trend by analyzing the price and volume of a given security. The MFI is used as a measure of the strength of money going in and out of a security and can be used to predict a trend reversal. The MFI is range-bound between 0 and 100 and is interpreted in a similar fashion as the RSI. The MFI calculation will depend on 14 days for this report.

**Bollinger Bands (BB):** A band plotted two standard deviations up way from a simple moving average, standard deviation is a measure of volatility, and Bollinger bands adjust themselves to the market conditions. When the markets become more volatile, the bands widen (move further away from the average), and during less volatile periods, the bands contract (move closer to the average). The tightening of the bands is often used by technical traders as an early indication that the volatility is about to increase sharply. The BB calculation will depend on 21-day simple moving average.

**Moving Average:** An indicator frequently used in technical analysis showing the average value of a security's price over a set period. Moving averages are generally used to measure momentum and define areas of possible support and resistance. For this report, we will use 5, 11, 21 and 50 days to calculate MA.

**C.P.:** Current Price, **MA:** Moving Average. **L.P.:** Last Price. **HP:** High Price
